Comment single frame with stars

Remarks **Single frame (frame #20) of 100 original frames to show the comet in the constellation of Auriga**[1. Session Planning](#)

Used **SkySafari Pro** for the actual comet coordinates together with **ASIAIR Pro** for **GoTo** and telescope guiding.

2. Location and sky

Unfortunately the sky conditions were only mediocre with high speed winds in the upper atmosphere and a rather bright sky resulting in much background noise. But this was the second night after many weeks of bad weather and rain. Had to quickly install and calibrate everything between sunset and before the nearly full moon rose above the horizon at 20:16h, I was still a little late before I could start the nearly 2 hours of frame capturing that only started at 19:33h local time (UCT+1).

3. Session Results

There was clearly too much sky brightness and a lot of background noise in the picture in no ideal conditions.

4. Plate Solving and Camera Rotation Results

ASIAIR rotation measurement: not done

Astrometry.net rotation measurement: 272,6° E of N

Plate Solve result (ASIAIR): not done

5. Post Processing

Used PixInsight for:

- Image selection
- Automatic Background Extraction
- and Full Final Stretch

and Lightroom for some color enhancement

No color or hue changes have been applied; the final image is showing natural colors.

6. Lessons Learned

none

7. Main logfile entries
